

VueTek®

Madico's "Vue Protection Teknology" for disposable eye protection films

Madico's disposable eye protection films can be used for many different protective lens and shield applications. The films provide ultraviolet protection, IR light rejection and varying visible light transmission. These films are highly effective at protecting post-mydratic patients' light-sensitive eyes by blocking out harmful sunlight, providing eye protection for people in a tanning booth, and during UV-curing procedures such as teeth whitening. The film can also be used in protecting patients/doctors from splashes during other medical or dental procedures.

Material Construction:

- Product thickness:.....5 - 10 mil
 - Polymeric substrate:Polyester: regular, biodegradable and metallized versions available
 - Colors:Customer specified
- All thicknesses are based on nominal data.*

Applications:

- Ophthalmologist and optometrist offices
- Dental clinics
- Tanning and beauty salons
- Hospitals
- Hospitality industry
- Industrial applications
- Outdoor sports

Benefits:

- >99% UV protection
- Blocks > 95% of blue light
- IR light rejection of 85%
- Varying VLTs
- Cost effective solution
- Lightweight and disposable
- Thermoformable material
